| Thesis Title | Geomorphological development of al shihaby alluvial fan | | |
| Year | 2008 | | |
| Abstract | <p>Abstract</p> <p>Alluvial fan is one of landforms spreading all over arid and semi-arid regions. It is spread of deposits in half-cycle form at the foot of mountains. It is distinguished from other phenomena which have been form in the same climate conditions in the it has the characteristic of rapid change which happens to it. This change is external and internal factors as such.</p> <p>The geographical and geomorphological importance of studying the alluvial fan derives from the fact that it enables us to know the formation and development of such a phenomenon which seizer a vast area in different regions.</p> <p>The zone of the study lies in the eastern part of Iraq and specifically in the wasit governorate. From the east it is bounded by Iraqi- Iranian borders, and from the west it is bounded by Tigris river at the town of Shekhsaad, between 32,56 and 32,50 latitudes in the north and between 46,28 and 46,23 longitudes in the east.</p> | | |
