Thesis Title	forecasting the precipitation by using cloud cover data in Iraq		
Year	2005		
Abstract	<p>I studied all type of clouds that reached or formation in Iraq. And my study interested in properties of cloud in Iraq like types and percentage coverage and base height and the relation between each of these properties with rainfall of its five shapes (drizzle- rains- snows- showers and thunder storms).</p> <p>The two pressure levels (850-500) Millibar is used to define the types of the surface and upper pressure system responsible of forming the types of clouds and their height forming different rainfall shapes in Iraq.</p> <p>T ϕ gram diagram is used to define the thickness and height of chosen types of low and medium clouds functionally through following up the temperature of air and dew point.</p>
